

[Realize](#) is a deep learning startup building cutting edge AI products for radiology, with an eye towards the broader healthcare landscape and beyond. Our results on the LUNA16 false positive reduction leaderboard were achieved using patent pending deep learning architectures, and we are interested in licensing this technology to commercial CAD systems. In addition to our CT lung work, we have developed a system for detecting intracerebral hemorrhage in CT head, and are currently planning to develop CAD solutions for chest X-ray. If you're interested in learning more, please feel free to get in touch using the contact info below.
